

VASTRAMS

Vendor & Finance Management System Comprehensive Screen Wireframes & Feature Specification

Author: Technical Systems Architect & Dev Team

Environment: Replit Hosting (asset-manager Sandbox)

Date: June 28, 2026

Version: 1.0.0

1. Document Scope & Overview

This document outlines the visual structure and interaction model of the **Vastrams** system. It provides low-fidelity sketchy wireframes for every page in the application, mapping out layout grids, data fields, validations, and interactive user flows.

2. Page Specifications & Low-Fidelity Wireframes

The Vastrams platform consists of 12 current modules and 3 proposed advanced screens. To maintain design consistency, similar screens share structural templates. Below is the mapping of each application page to its corresponding low-fidelity wireframe layout:

2.1 Dashboard Screen (/)

The primary entry point compiling KPI metric cards, comparative liability breakdown charts, and active outstanding leaderboards.

Dashboard Page Structure: - Left sidebar for main menu navigation. - Top horizontal panel displaying login/logout state and search. - Summary metrics showing total outstanding liabilities, overdue counts, and cheque alerts. - Mid-section graphic representing a bar chart comparing vendor liabilities against loan obligations. - Lower section displaying sorted lists of top 5 outstanding vendor balances.

Figure 1: Dashboard (/) Wireframe Layout

2.2 List View & Data Table Screens

The following screens utilize a unified data table template with filter panels, search controls, and quick action icons:

- **Vendors Management (/vendors)**: Profile registry with status badges.
- **Purchase Bills (/bills)**: Searchable index of incoming invoices.
- **Financiers Registry (/financiers)**: Record sheets of capital lenders.
- **Loans Registry (/loans)**: Promised loan notes indexing.
- **Vendor Payments Log (/vendor-payments)**: Records of payments made to vendors.
- **Financier Repayments Log (/financier-payments)**: Records of repayments made to financiers.
- **Cheque Registry (/cheques)**: Ledger tracking check clearance statuses.

List View Page Structure:

- Search input bar and dropdown filters (such as status filter) at the top of the pane.
- "Create New" action button styled in accent light purple to launch form entry templates.
- Tabular grid displaying system records with horizontal rows, status badges, and action icon buttons (Edit, Delete).

Figure 2: General List View and Table Screen Layout

2.3 Form Entry & Input Validation Screens

The following screens utilize the generic card-based form input layout with inline field validation rules: -

Create/Edit Vendor Form (/vendors/new) - **Create Purchase Bill Form** (/bills/new) - **Create/Edit Financier Form** (/financiers/new) - **Create Loan Form** (/loans/new) - **Create Payment Form** (/vendor-payments/new) - **Create Repayment Form** (/financier-payments/new) - **Create/Edit Cheque Form** (/cheques/new)

Form Entry Page Structure: - Title header indicating current action (e.g. "Create Purchase Bill"). - Multiple validation-enforced fields: required text boxes, selection dropdowns, status toggles, date pickers. - Action actions panel containing "Cancel" (gray outline) and "Submit" (light purple highlight) buttons.

Figure 3: General Form Entry and Validation Screen Layout

2.4 Financial Ledger & Outstanding Report Screens

The following audit-focused screens employ double-entry balance tables with filters: - **Outstanding Report (/outstanding)**: Summarized aging sheet tracking overdue liabilities. - **Running Ledger (/ledger)**: Detailed transaction record sheet showing running account balances. - **Transaction History (/transactions)**: Comprehensive audit trail with soft-delete controls.

Ledger / Outstanding Page Structure: - Filters panel enabling selection of parties (dropdown) and date parameters. - Multi-column ledger table showing Date, Type, Debit, Credit, and Running Balance. - Highlighted summary total row at the base of the list.

2.5 Reports & Performance Panel Screen (/reports)

Provides tabular summaries and interactive visual charts. Includes sub-tabs for Vendor Outstanding, Financier Outstanding, Payment Outflows, and Monthly Chart panels.

Reports Page Structure: - Horizontal navigation tab bar (active tab styled in light purple). - Card container enclosing summary KPI cards. - Central bar chart indicating monthly payment and liability volumes.

3. Proposed Advanced UI Modules & Wireframes

The following screens represent the advanced additions proposed to enhance control and simulation functionality in Vastrams.

3.1 Maker-Checker Dual-Authorization Dashboard

Ensures payment security by introducing maker-checker separation of duties: - Left pane displays the approval queue (pending transactions). - Right pane displays transaction details, including a dry-run allocation breakdown. - Bottom actions provide options to "Reject Request" (with reviewer notes) or "Approve Payment".

3.2 Bank Statement Reconciliation Dashboard

Enables ledger verification by comparing imported bank statement records with internal books: - Left side: upload zone supporting CSV drag-and-drop. - Right side: system ledger list showing match confidence scores.

Figure 7: Proposed Bank Reconciliation Tool UI Wireframe

3.3 Cash Flow Forecasting & Scenario Simulator

Allows management to run projections of accounts receivable vs accounts payable: - Central visual area chart representing 30-day projection trends. - Interactive switches for Optimistic, Pessimistic, and Neutral scenarios.

4. Interactive User Flow Architectures

4.1 Proposed Maker-Checker Payment Lifecycle Flow

The flowchart below maps out the sequence of steps for submitting, verifying, and committing transactions under the new authorization framework:

Figure 9: Proposed Maker-Checker Payment Approval Lifecycle

5. Core Screen Layout Validation Rules

To guide developers during implementation, the following rules apply globally:

1. **Required Fields:** All required inputs must display a red indicator asterisk. Attempting to submit a form with missing fields highlights them in red and focuses the first invalid input.
2. **Form Layouts:** Multi-column forms (Figure 3) must use a responsive grid that collapses to a single column on mobile viewports.
3. **Table Actions:** All list views (Figure 2) must place actions in the final column, with a confirmation modal appearing before any deletion occurs.
